38h	Description State of the state	
	Description: You are given an N- dimensional array arr[]. A peak element in the array is defined as an element whose value is greater than or equal to its neighboring elements (if they exist). Your task is to find the index of any peak element in the given array	
223051	Note: use 0-based indexing	(
R.V		
38	Input:	
51038	An integer representing the number of elements in the array. N space-separated integers, denoting the elements of the array. N space-separated integers ,denoting the elements of the array arr[]	,
